Coordination Center

Evening Summary

Date/Time Stamp: **Saturday, August 29, 2015 - 10:01 PM**

Weather Summary

Temperatures will drop 10-15 degrees behind the front late tonight and into Sunday. Isolated showers are possible over much of the region with the best chance of a wetting rain over southeast Idaho. On Sunday another front moves through the far north for a shot of showers over northwest Idaho and may impact ongoing fires in that region.

Dry west/southwest flow returns early in the week for generally sunny skies and warming temperatures regionwide. Another trough moves into the Pacific NW mid week which will likely increase wind speeds across the region once again. This next front looks to bring a better chance of a wetting rain across the mountains of central Idaho in the Thursday/Friday time frame.

Preparedness Levels

Current:

Great Basin	5
National	5

Great Basin Fire Activity:

New Fires and Acres: 13 fires for 356 acres – 8456 acres from large fire growth

Resources:

GBCC is below draw-down for Initial Attack

- Starting to see a small surplus of Type 6 Engines in the Great Basin.

Interesting historical resource data comparison

Great Basin Fire Potential Summary

IA will likely still occur across Utah/southeast Idaho/Wyoming through the remainder of this weekend as widely scattered thunderstorms continue.

Overall fire danger will be **decreasing** across Idaho after the cold front moves through late Saturday and into Sunday with a chance of showers across far northern Idaho. Fire danger will further decrease across the north by mid week next week with another trough. Dry conditions will continue across Nevada and Utah and new IA is possible there, especially on windy days.
